

1 JM Valve Oil 1 – Synthetic Light Piston – 50ml

A light synthetic valve oil, which was developed especially for instruments with still very dense piston valves. Enables a smooth, fast and even valve clearance.

2 JM Valve Oil 2 – Synthetic Medium Piston & Rotor – 50ml

A long lasting synthetic valve oil specially developed for piston and rotary valves with average clearance. Provides long lasting, smooth, fast and even valve clearance.

3 JM Valve Oil 3 – Synthetic Heavy Piston & Rotor – 50ml

A synthetic valve oil for the protection of piston and rotary valves. Helps to seal valves that already have a slightly larger clearance. Allows a long lasting, smooth and fast valve clearance and prevents getting stuck.

5 JM Slide Oil 5 – Synthetic – 30ml

A synthetic Slide oil that guarantees the tightness and smoothness of all slides. Particularly suitable for smooth-running slides with tone compensation. Also dampens vibrations and is suitable for worn out joints.

7 JM Slide Gel 7 – Synthetic – 30ml

The preferred synthetic lubricant for all tuning slides. Seals permanently and prevents the formation of lumps at the end of the slide thanks to its good adhesive properties. Protects against corrosion and wear.

11 JM Rotor Oil 11 – Synthetic – 30ml

A durable synthetic oil, specially formulated for instruments with rotary valves. Guarantees fast response and smooth running. Protects against corrosion and wear.

13 JM Bearing Oil 13 – Synthetic – 30ml

For rotary valves with still small bearing clearance. This synthetic oil ensures maximum wear resistance and corrosion protection for all types of bearings and rod without reducing smoothness.

13,5 JM Bearing & Linkage Oil 13,5 – Synthetic – 30ml

For rotary valves with average bearing clearance. This synthetic oil ensures maximum wear resistance and corrosion protection for all types of bearings and rod without reducing smoothness.
